Research Summary

- System design, implementation and evaluation of a novel discovery framework for the authentication and authorization of xApps in the O-RAN architecture. (**https://github.com/tolgaoa/xrfoauth**)
- Isolation of critical microservices (ARPF, SIDF, SEAF) for the 5G core control plane using different isolation strategies including Intel SGX. (**private repo**)
- Creating a distributed tracing framework for end-to-end 5G core deployments (OAI) by augmenting VNFs with Side Car Proxies that enable indirect communication. Collecting context spans using OpenTelemetry to forward to a Jaeger collector. (**https://github.com/tolgaoa/monitor5G**)
- 5G core deployments with different network slice topologies. User traffic recreation over AWS edge zones in 7 different countries and 18 different edge zones. Assessing the 5G control plane latency and user plane throughput for large scale network slice deployments.(**https://github.com/tolgaoa/devdep5g**)
- Design of a Service mesh Tailored for Rapid, Efficient and Authorized Microservices (STREAM) in a decentralized 5G core deployment to reduce control plane processing latency. Refactoring the monolithic 5G core VNFs to be deployed as finer-grained microservices in the public cloud. (**private repo**)

Experience

2021–May-Dec **5G R&D Intern** at *Kryptowire Labs*

2022–May-Aug **Project:** *DARPA Open, Programmable, Secure 5G (OPS-5G) - Technical Area 4 - Principled programmable defences*

- Construction of a state-of-the-arit open source 5G testbed for integration and testing of cybersecurity primitives.
- System design an evaluation of large-scale 5G deployments for DDoS mitigation and malware detection.
- System design, implementation and evaluation of OpenRAN security frameworks for 5G integration.
- Large scale 5G core deployments in the AWS public cloud to assess real-life performance of next generation infrastructure deployments.
- Prepared/presented presentations and demos at DARPA PI meetings and site-visits.

Education

2018 – Present **Doctor of Philosophy** in Computer Engineering, *Virginia Tech*

2016 – 2018 **Master of Science** in Telecommunications, *Danmarks Tekniske Universitet (DTU)*

2012 – 2016 **Bachelor of Science** in Electrical and Electronics Engineering, *Bilkent University*

Skills

Programming: C, C++, Go, Python
Platforms: AWS, Cloud (OpenStack, Kubernetes, Docker), shell scripting, OpenTelemetry, TTCN-3, MATLAB
Background: 5G/OpenRAN architecture, 3GPP/ETSI/OpenRAN standardization, microservices, side car proxies, system design/architecture, networking, cybersecurity, software-defined radios, conformance testing
